

PRISM

Shared Expenses

Landing Page Strategy & Website Restructure Plan

A professional marketing direction document focused on positioning Prism as a shared expense tracker first, with personal finance tools as a supporting add-on.

Core Positioning Statement

Prism is a shared expense tracker built to make split costs simple, clear, and easy to settle. Personal finance tools are included, but they are not the main pitch.

Document Purpose

This PDF organizes the new homepage direction, page order, copy language, messaging priorities, and implementation prompt for restructuring the Prism website around the Shared Expenses feature.

Primary Goal

Reposition Prism so the first thing visitors understand is that the application solves a relatable everyday problem: managing shared costs, knowing who owes who, and settling balances without confusion.

1. Marketing Pivot

New Direction

Prism should not be marketed as a personal finance app with shared expenses as a feature. It should be marketed as a shared expense tracker that also helps users manage personal finances.

Old Positioning

A personal finance dashboard with shared expenses included as one of many features.

New Positioning

A shared expense tracker that clearly shows who paid, who owes who, how much is owed, and what has already been settled. Personal finance tools become a valuable add-on, not the main selling point.

Why This Works

- Shared costs are highly relatable across roommates, couples, friends, families, trips, and small teams.
- The pain is easy to understand: people lose track of who paid, who still owes, and whether a balance was settled.
- This gives Prism a sharper purpose than a generic budgeting or finance dashboard.
- The marketing becomes more emotional and useful because it solves a real everyday money problem.

Core Website Message

Main Message

Stop guessing who owes who. Prism makes shared expenses clear.

Language Direction

The homepage should use plain language that immediately communicates the outcome. The visitor should feel, "This solves a problem I have."

- Use: shared expenses, split costs, shared bills, who owes who, settle balances, paid back, reimbursements, clear records.
- Reduce: budgeting software, finance management platform, spending analytics, bookkeeping system, advanced dashboard.
- Keep the tone clear, practical, modern, and relatable.

2. Recommended Homepage Structure

The homepage should be reordered so the Shared Expenses feature becomes the main story. Personal finance should appear later as supporting value.

Order	Section	Purpose
1	Hero Section	Immediately communicate that Prism solves shared expenses and split-cost confusion.
2	Problem Section	Make the visitor feel the pain of messy shared costs before presenting the solution.
3	Main Shared Expenses Section	Show the core feature clearly: who owes who, how much, and whether it is settled.
4	Use Cases Section	Show that shared expenses apply to roommates, couples, friends, families, trips, and small teams.
5	How It Works Section	Explain the simple flow: add it, split it, see balances, settle up.
6	Personal Finance Add-On Section	Position dashboards, categories, and spending tracking as bonus tools.
7	Final CTA Section	Close with a direct shared-expense CTA focused on clarity and action.

3. Section-by-Section Direction

1) Hero Section

The hero should immediately sell the shared expense problem. Do not lead with budgeting, charts, or general finance tracking.

HEADLINE OPTIONS

- Shared expenses, finally made clear.
- Know exactly who owes who.
- Split costs without the awkward math.
- Track shared expenses without the confusion.

RECOMMENDED SUBHEADLINE

Hero Copy

Prism helps you track shared bills, split costs, see who owes who, and settle balances clearly - with personal finance tools built in when you need them.

CTA BUTTONS

- Primary CTA: Start Tracking Shared Expenses
- Secondary CTA: See How It Works

2) Problem Section

This section should make the user feel the common pain before introducing feature details.

Problem Headline

Shared costs get messy fast.

One person pays for groceries. Someone else covers dinner. Rent, utilities, subscriptions, trips, and random expenses start piling up. Prism keeps everything clear so nobody has to guess, argue, or scroll through old messages.

PROBLEM CARDS

- Who paid for what? Track every shared cost in one place.
- Who still owes? See balances between people instantly.
- Was it settled? Mark payments complete and keep a clean history.

3) Main Shared Expenses Section

This should be the strongest section on the page and should visually answer the most important user questions.

Core Section Headline

See the answer in seconds.

- Who owes who? Show names and balances clearly.
- How much? Display the exact amount owed.
- Can I settle it? Add a clear settle button or settlement status.

Design direction: Use a simple shared-expense interface preview with people, amounts owed, balance status, and a settle action. Keep this section clean. The user should instantly understand the product value without reading a paragraph.

4) Use Cases Section

Use cases make the feature relatable. Visitors should recognize themselves in at least one situation.

- Roommates: Rent, utilities, groceries, and household supplies.
- Couples: Shared bills, dinners, trips, and subscriptions.
- Friends: Group meals, vacations, events, and outings.
- Families: Household costs, reimbursements, and shared responsibilities.
- Small teams or projects: Supplies, job costs, purchases, and reimbursements.

5) How It Works Section

Section Headline

Add it. Split it. Settle it.

1. Add an expense: Enter what was paid, who paid it, and who was involved.
2. Split the cost: Divide it evenly or customize each person's share.
3. See balances: Prism calculates who owes who automatically.
4. Settle up: Mark balances as paid and keep a clean record.

6) Personal Finance Add-On Section

Move personal finance lower on the page. Present it as an included benefit, not the headline.

Section Headline

Personal finance tools are included too.

Prism also gives users a clean way to track personal spending, organize expenses, and understand where money is going - but the main focus stays on keeping shared costs clear.

- Expense tracking: Log and organize spending.
- Categories: Understand where money is going.
- Dashboard insights: View simple charts and summaries.

7) Final CTA Section

Final CTA Copy

Make shared expenses easier to manage. Track what was paid, who owes who, and what has already been settled - all in one clear place.

- Primary CTA: Start Tracking Shared Expenses

4. Website Copy Guidelines

The copy should be simple, specific, and outcome-focused. The main idea should be repeated in different ways across the page: Prism gives clarity to shared costs.

Use More of This Language

- Shared expenses
- Split costs
- Shared bills
- Who owes who
- Settle balances
- Paid back
- Reimbursements
- Clear records
- Everyone pays their part
- No awkward math

Use Less of This Language

- Personal finance dashboard
- Budgeting software
- Spending analytics
- Financial management platform
- Bookkeeping system
- Advanced finance tracking
- Generic expense tracking

Recommended One-Liners

- Stop guessing who owes who.
- Track shared costs in one clear place.
- Split bills without messy spreadsheets or group chat math.
- See who paid, who owes, and what has been settled.
- Built for the everyday costs people share.

Conversion Checklist

- The hero mentions shared expenses before personal finance.
- The page explains the problem before listing features.
- The Shared Expenses section appears near the top of the page.
- The main feature answers: who owes who, how much, and can I settle it?
- Use cases are broad enough for roommates, couples, friends, families, trips, and teams.
- Personal finance appears as a secondary add-on.
- The final CTA repeats the shared expense value clearly.

5. Full Website Restructure Prompt

Use the prompt below to update the website direction and layout while keeping the current Prism visual style.

Restructure the Prism landing page so the main marketing focus is Shared Expenses, not general personal finance.

The new direction should position Prism as a shared expense tracker that helps users clearly see who paid, who owes who, how much is owed, and what has already been settled. The personal finance dashboard should be treated as a secondary add-on feature, not the main selling point.

Update the page order and messaging with this structure:

1. Hero Section

Lead with shared expenses. Use a strong headline like "Shared expenses, finally made clear" or "Know exactly who owes who." The subheadline should explain that Prism helps users track shared bills, split costs, view balances, and settle up clearly. Add a strong primary CTA focused on shared expenses.

2. Problem Section

Explain the common pain: shared costs get messy fast. Mention rent, groceries, utilities, trips, subscriptions, dinners, and group expenses. Make the user feel the problem before showing the solution.

3. Main Shared Expenses Section

Make this the strongest section on the page. It should clearly answer:

- Who owes who?
- How much?
- Can I settle it?

Show a simple shared expense interface preview with clear balances, people, amounts owed, and settle status/buttons. Keep this section clean and easy to understand.

4. Use Cases Section

Show that shared expenses apply to roommates, couples, families, friends, trips, and small teams/projects. Keep the language broad and relatable.

5. How It Works Section

Use a simple 4-step flow:

- Add an expense
- Split the cost
- See who owes who
- Settle the balance

6. Personal Finance Add-On Section

Move the personal finance features lower on the page. Present them as included bonus tools: expense tracking, categories, spending dashboard, and financial overview. Do not make this the main focus.

7. Final CTA

End with a strong shared-expense CTA: "Start tracking shared expenses clearly."

Keep the current glassmorphism design, dark premium background, green/purple/pink gradient accents, and modern Prism visual style. Reduce generic personal finance language and replace it with shared-expense-focused wording such as "split costs," "shared bills," "who owes who," "settle balances," "paid back," and "clear records."

Make the page feel more targeted, relatable, and conversion-focused. The user should immediately understand that Prism solves the everyday problem of managing shared costs.

6. Final Summary

Primary Strategy

Lead with Shared Expenses. Sell the everyday problem first. Treat personal finance as a helpful add-on.

The Website Should Make This Clear

- Prism helps users track shared costs.
- Prism shows who paid and who still owes.
- Prism calculates balances automatically.
- Prism helps users settle balances and keep clean records.
- Prism also includes personal finance tools, but those tools support the main shared-expense value.

Best Main Homepage Statement

Recommended Statement

Prism is a shared expense tracker built to make split costs simple, clear, and easy to settle.

Best Direction for the Brand

Prism should feel like the easiest way for everyday people to manage money together. The site should be modern and polished, but the message should stay simple: no confusion, no awkward math, no guessing who owes who.

Implementation Priorities

5. Rewrite the hero around shared expenses.
6. Move the Shared Expenses section directly near the top.
7. Create a strong problem section that talks about messy shared costs.
8. Make the core feature visually answer who owes who, how much, and settlement status.
9. Move personal finance lower and present it as an included bonus.
10. Repeat the shared-expense CTA at the top and bottom of the page.
